

ADEWUNMI ABDULHAMEED

Software Engineer

Ile-Ife, Nigeria | +234 814 350 8569 | adewunmiabdulhameed7@gmail.com | github.com/Abdulhameed-A-A | [LinkedIn](#) | [LeetCode](#)

SUMMARY

Computer Engineering student with hands-on software engineering experience across frontend web development and Java systems programming, combining a systems/hardware foundation with practical, shipped work. Passionate about building high-performance, robust applications and pixel-perfect user interfaces.

EDUCATION

Obafemi Awolowo University, Ile-Ife, Nigeria, B.Sc. Computer Engineering

- Expected March 2028
- Relevant Coursework: Data Structures & Algorithms (Arrays, Hash Tables, Trees, Graphs, Dynamic Programming), Object-Oriented Programming, Database Management Systems, Software Engineering Principles, Computer Systems Architecture

EXPERIENCE

Frontend Developer, Yebaot Luxury Vehicle Marketplace | [Live Link](#) | Jan 2026 to Present

- Built a full-stack marketplace application using Next.js App Router, React, and TypeScript with responsive user interfaces.
- Engineered vehicle listing management workflows (CRUD) with dynamic client-side forms and image upload processing.
- Integrated Supabase database & REST API endpoints for seamless authentication, search filtering, and state persistence.

Cowrywise Ambassador, Cowrywise | Jun 2024 to Present

- Promoted financial literacy and represented Cowrywise on campus to drive student engagement.
- Collaborated with a network of ambassadors to organize campaigns and onboard new users to the platform.

SELECTED PROJECTS

SwiftShare P2P File Transfer, Java, Swing, TCP Sockets, JmDNS | [GitHub](#)

- Engineered a cross-platform desktop app for zero-configuration local file sharing using Java and Swing.
- Implemented P2P device discovery via mDNS and built a multi-threaded TCP socket architecture for directory transfers.
- Designed path normalization logic and packaged standalone native installers (.exe, .deb) using jpackage.

Custom JSON Parser, Java 21, Maven, JUnit 5 | [GitHub](#)

- Developed a zero-dependency JSON parser in Java 21, implementing lexical analysis and an AST architecture.
- Leveraged modern Java features (sealed interfaces, records, switch matching) to enforce strict type safety over the AST.
- Configured a continuous testing pipeline using Maven and JUnit 5 to ensure parser accuracy and structural integrity.

Linux System Inspector, Java, CLI, Linux Utilities | [GitHub](#)

- Developed a Java CLI utility to monitor real-time Linux system metrics via ProcessBuilder and parse output into structured Java records.
- Implemented custom logic for analyzing system resources, including a disk health evaluator, accessible via an interactive console menu.

ADDITIONAL SCHOOL PROJECTS

Agent Based Traffic Signal Control System (MAS) | Group Leader | [GitHub](#)

- Led a team to develop a Multi Agent System (MAS) for traffic signal control using TraCI perception logic and Kuramoto coupled oscillator mathematics.
- Engineered a fully integrated dashboard for monitoring simulation metrics, agent decisions, and green wave coordination in real time.

Smart Campus Transport (IoT RFID System) | Frontend Developer & Hardware Integration | [Live Link](#)

- Built the frontend architecture for an IoT based RFID bus card reader system, implementing secure JWT session management and real time data polling.
- Developed strict state handling for financial transactions and journey tracking, ensuring accurate representation of integer based currency data from the backend APIs.
- Engineered resilient UI workflows to synchronize with the physical RFID hardware, handling edge cases like lost card deactivation and missing tap-outs.

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, Java, SQL
- Frontend/Mobile: React.js, Next.js, Tailwind CSS
- Backend/DB: REST APIs, Supabase, Relational Databases
- Tools/Concepts: Git / GitHub, JUnit, Maven, Object-Oriented Programming, Data Structures & Algorithms (Trees, Graphs, Hash Tables, Dynamic Programming)

CERTIFICATIONS

- Introduction to agent skill, Anthropic (May 2026)
